TIME DISSEMINATION METHODS FOR
NETWORK AND LOCAL TELEVISION - ABSTRACT

by George Kamas*

The National Bureau of Standards is conducting experiments in the utilization of television for the dissemination of time and frequency. The long-term objective of these experiments is to develop a television time dissemination system for the United States. Various techniques of television time dissemination and display are discussed. The paper will be available from the National Bureau of Standards Time and Frequency Division in Boulder, Colorado in the near future.
